

Guillermo Bergesio

SOFTWARE ENGINEER

bergesiog1@gmail.com | bergesiog.vercel.app | Córdoba, Argentina

ABOUT ME

Fullstack developer with a backend focus and experience in microservices, cloud environments, and continuous deployment. Technical focus on Java (Quarkus, Spring), Node.js, SQL, Elasticsearch, and GCP. I value teamwork, continuous learning, and building scalable solutions that generate real impact. I enjoy leading technical initiatives, participating in architecture decisions, and actively contributing to project growth.

WORK EXPERIENCE

Software Engineer

Softtek | March 2024 – Present

- Cross-functional role focused on covering the full application lifecycle, delivering technical value across all layers of the system.
- Collaborative development of an AI-powered API for symptom resolution, medical specialty referral, and mental health support.
- Development and maintenance of backend microservices with Java (Quarkus) and Node.js, integrating SQL databases and Elasticsearch.
- Active participation in service migration from Node.js to Java, focusing on performance, maintainability, and standardization.
- Contribution to technical design and improvement of the modular system architecture. Implementation of scalable solutions oriented toward resilience, observability, and best practices (logging, tracing, design patterns).
- Automation of deployments via CI/CD pipelines (GitLab CI), containerization with Docker, and orchestration with Kubernetes in environments like Tanzu and Google Cloud Platform (GCP).
- Work in agile, multidisciplinary teams — collaborating on task definition, production problem resolution, and documentation of key services.

Full Stack Developer

Quinto Impacto | August 2023 – March 2024

- Coordinated development teams in the innovation area (Semillero), leading MVP projects from scratch using Java (8/11/17), Spring, React, and SQL databases.
- Applied agile methodologies, promoted best practices (code reviews, pair programming sessions), and participated in both new developments and improvements to existing projects.

Full Stack Developer

Liveware | February 2023 – December 2023

- Maintenance and improvement of an application built with Java 7, including a JSF frontend.
- Used SVN for version control and deployments across multiple environments.
- Worked with technologies such as Oracle, Jenkins, Jasper Reports, Hibernate, and Red Hat.

React Developer

JDev Soluciones Digitales | September 2022 – February 2023

- Frontend development from scratch of a management application for small academies using Next.js and Material-UI. (Freelance Project)

TECH STACK

Backend: Java · Spring · Spring Cloud · Quarkus · Node.js

Frontend: JavaScript · React.js · Next.js · Formik

Data: SQL · Elasticsearch

DevOps & Cloud: GCP · Docker · Kubernetes · GitLab CI/CD · Git

EDUCATION

Full Stack Bootcamp

MindHub | March 2022 – June 2022

800+ hours of full-time training in fullstack web development.

Master Elasticsearch, Logstash & Kibana 8x (Elastic Stack)

Udemy | 2025

Unit Tesging - Spring Boot - JUnit y Mockito.

Udemy | 2025
